

LON to RS-232/485 Network Communication Bridge

This device enables communication between LON (Local Operating Network) and RS-232/485 networks. It is equipped with terminal blocks for connections and LED indicators for monitoring status.

Overview

Industrial Network Integration

This network communication bridge facilitates seamless data exchange between LON (Local Operating Network) and RS-232/485 serial networks. Designed for robust industrial environments, the unit features clear LED status indicators and accessible terminal blocks for simplified installation. It serves as a reliable gateway solution for bridging legacy or specialized network protocols.

Technical Specifications

Power Supply	12 V DC
Supported Interfaces	LON, RS-232, RS-485
Model Identifier	HM-BA5221

Features

Connectivity Features

- LON Network Module Integration
- Dedicated RS-485 A/B Terminals
- TXD/RXD Communication Support
- Grounding Terminal (GND)

Status Monitoring

Power Indicator • Communication Activity • Safety Status
