

Long-Axle Submerged Pump for Agricultural Irrigation

This long-axle submerged pump is designed for drainage and irrigation in agricultural settings. Its long shaft allows for submerged operation and efficient water transfer.

Product Overview

High-Efficiency Irrigation Solution

The JFY type long-axle submerged pump is engineered specifically for demanding agricultural irrigation and drainage tasks. By utilizing a long-shaft design, this unit allows for reliable submerged operation, ensuring efficient water transfer even in deep water sources. The system is optimized for energy conservation, making it a cost-effective choice for professional agricultural water management.

Technical Specifications

Pump Type	Long-axle submerged pump
Series	JFY

Key Features

Performance Highlights	High Efficiency, Energy Saving, Submerged Operation, Agricultural Grade
------------------------	---

Applications

Primary Applications

- Agricultural Irrigation
- Drainage Systems
- Water Transfer
