Overview

Long Tail Boat Propulsion System

This long tail boat shaft system is designed for efficient propulsion in shallow water environments, making it ideal for navigation in regions where standard outboard motors may struggle. The system integrates robust components including specialized flanges, brackets, and propellers to ensure reliable performance. Compatible with a range of gasoline engines, these shafts provide a versatile solution for powering small boats and canoes.

Technical Specifications

Model Specifications

Model	Engine Power (HP)	Propeller Diameter (mm)	Shaft Length (mm)
SU85A	5.5-7.5	165	2160
SU100A	9-10	203	2540
SU100B	13-16	216	2540

Components & Accessories

Included Components

- Shaft assembly
- Flanges (FLANGE-1, FLANGE-2, FLANGE-3)
- Mounting brackets
- Steel screws
- Aluminum head screws
- Brass nuts
- Bearings
- Oil cups
- Nylon components

Available Propeller Sizes

6 1/2 inch, 7 inch, 7 1/2 inch, 8 inch
