

Low Frequency Uninterruptible Power Supply

These low frequency UPS systems provide stable power backup for critical applications. They ensure continuous operation during power outages and voltage fluctuations, protecting sensitive electronic equipment.

Product Overview

Reliable Power Protection

This online low-frequency Uninterruptible Power Supply (UPS) is engineered to provide stable and continuous power backup for critical applications. Designed for demanding environments like data centers, industrial facilities, and medical equipment, it offers robust construction and advanced control technology. The system ensures protection against voltage fluctuations and power outages, maintaining the integrity of sensitive electronic equipment.

Key Features

Core Benefits

- High efficiency performance
- Excellent overload capacity
- Comprehensive system monitoring
- Advanced thermal management

Technical Specifications

Build Quality

Industrial-grade components • Robust construction

Cooling Configuration

Dual-section multi-fan thermal management system

Ideal Applications

Data Centers, Industrial Facilities, Medical Equipment

Logistics

Shipping Format

Mounted on wooden pallet for secure transport
