

Low Profile Hydraulic Floor Jack

This hydraulic floor jack features a low profile design, making it suitable for lifting vehicles with low ground clearance. Its durable steel construction, swivel casters, long handle, safety valve, and rubber saddle pad make it ideal for automotive maintenance and repair.

Overview

Professional Hydraulic Service Jack

This low profile hydraulic floor jack is engineered for precision and reliability in automotive maintenance environments. Designed specifically for vehicles with limited ground clearance, it combines a durable steel construction with smooth maneuverability. It is an essential tool for professional workshops and garages requiring safe and efficient lifting capabilities.
