

Low Voltage Surge Arrester with Elbow Fitting

This low voltage surge arrester is equipped with a 90-degree elbow fitting. It protects electrical systems from transient overvoltages and surges.

Product Overview

Professional Surge Protection

This low voltage surge arrester is engineered to safeguard critical electrical systems against transient overvoltages and unexpected power surges. Featuring a robust 90-degree elbow fitting design, it ensures reliable connectivity and protection in constrained spaces. The unit is constructed with a durable rubberized housing and includes a dedicated grounding wire with a metal clip for secure installation.

Technical Specifications

Application

Low Voltage • Surge Protection

Fitting Type

90-degree elbow

Housing Material

Rubberized

Grounding

Grounding wire included, Metal clip connector
