

LPG/Gas Space Heater

This space heating apparatus is designed for efficient and reliable heating using Liquefied Petroleum Gas (LPG) or natural gas. It is ideal for use in workshops, garages, and construction sites, providing a powerful and consistent heat output.

Overview

Professional Heating Solution

The BA-15 is a high-performance space heater designed for demanding environments like workshops, garages, and construction sites. It utilizes Liquefied Petroleum Gas (LPG) or natural gas to deliver powerful and consistent heat output. Built with a robust cylindrical chamber and a durable base, this heater combines reliability with essential safety features, including an automatic shut-off mechanism.

Technical Specifications

Safety Mechanisms

- Automatic gas shut-off
- Overheat protection

Fuel Source

LPG, Natural Gas

Design & Build

Portability

Integrated handle • Stable base

Construction

Cylindrical heating chamber
