

Macerating Toilet Pump

This macerating toilet pump is a self-contained unit for efficient waste disposal where standard plumbing is difficult. It finely grinds waste and pumps it to a remote tank or sewer line.

Product Overview

Efficient Waste Management Solution

This self-contained macerating toilet pump is engineered to facilitate toilet installation in locations where conventional gravity-based plumbing is challenging or impossible. By utilizing a robust motor and integrated macerating blade system, the unit finely grinds waste, allowing it to be pumped to remote holding tanks or sewer lines. Its compact, durable design is suitable for diverse residential and commercial applications, including basements, cabins, and boats.

Technical Specifications

Performance Metrics

1 Self-contained
System Type

Key Features

Macerating Blade System, Compact Design, Quiet Operation, Enclosed Electrical Components

Installation & Usage

Ideal Applications

- Basements
- Cabins
- Boats
- Residential renovations
- Commercial restrooms

Plumbing Configuration

Features multiple inlet and outlet connections for versatile installation setups.
