

Machine Moving Equipment

This machine moving equipment is lightweight and easy to maneuver. It features a robust construction with a durable platform and smooth-rolling wheels for effortless transport.

Product Overview

Industrial Machine Moving Solution

This machine moving equipment is designed to facilitate the transport of heavy machinery and regular-shaped objects without the need for electricity or fuel. By utilizing physical properties to reduce friction, it enables smooth and efficient movement across industrial surfaces. The equipment features 360-degree rotating wheels that are specifically engineered to protect flooring from scratches during operation.

Key Features

Movement Capabilities

- 360-degree wheel rotation
- Friction reduction technology
- Manual operation (no fuel or electricity required)
- Floor protection design

Application Suitability

Industrial Machinery, Regular-Shaped Objects, Warehouse Transport
