

Machine Moving Skates with Rollers

These skates are designed for transporting heavy machinery and equipment. Their robust steel construction and multiple rollers ensure smooth and efficient movement.

Product Overview

Professional Machine Moving Solutions

These professional-grade machine moving skates are engineered for the safe transport of heavy industrial equipment. Featuring robust steel construction and specialized rollers, they ensure efficient and stable movement across various warehouse surfaces. The integrated non-slip top surfaces provide added security during relocation tasks, making them an essential tool for logistics and equipment maintenance.

Technical Specifications

Load Capacity Range

10 T

Minimum Capacity

48 T

Maximum Capacity

Certifications

CE, GS, ISO 9001

Operational Details

Operational Flexibility

- Standalone usage for individual equipment
- Combined multi-skate configuration for heavy loads
- Suitable for warehouse handling
- Ideal for storage and transport logistics

Construction Quality

Design & Safety Features

- High-strength steel construction
- Integrated non-slip surface pads
- Precision roller arrangement
- Enhanced durability for industrial environments
