

Machine Tool Component

This is a machine tool component used in various industrial applications. It is manufactured to precise measurements.

Product Overview

Precision Machine Tool Component

This specialized machine tool component is engineered for high-precision industrial applications, serving as a critical fastener or structural element in complex assemblies. Designed with strict dimensional tolerances, it ensures reliable performance and seamless integration within machine tool systems. Its robust construction supports consistent operation, making it an essential choice for manufacturing environments requiring exacting standards.

Technical Dimensions

Dimensional Parameters

Parameter	Description
D	Body Diameter
d	Shank Diameter
L	Overall Length

Head Diameter Ratio	1.6D
Compliance	Precision Engineered, Industrial Grade
