

Machine Tool Coolant Pump

This machine tool coolant pump features a durable plastic housing with a motor and strainer basket. It is designed for efficient water circulation with threaded ports for plumbing connections and a sturdy base for stable operation.

Overview

High-Performance Coolant Pump

This robust coolant pump is engineered for efficient fluid circulation in industrial machine tool applications. Featuring a durable black housing and an integrated motor, it provides reliable performance for demanding environments. The design includes a clear strainer basket for easy maintenance and visual inspection, ensuring optimal flow and longevity.

Technical Specifications

Key Design Features

- Transparent strainer basket lid
- Integrated motor assembly
- Threaded fluid ports
- Stable mounting base

Housing Material	Reinforced Plastic
Power Source	Electric
Primary Application	Machine Tools, Coolant Circulation, Industrial Fluid Handling
