

Machinery Ball Bearing with Robust Housing

This rolling bearing is designed for machinery applications. It features a robust housing, providing support and protection for the internal bearing elements.

Product Overview

Industrial Machinery Ball Bearing

This high-performance rolling bearing is engineered for demanding industrial machinery applications. Featuring a robust housing constructed from durable cast iron or steel, it provides superior support and protection for internal rotating elements. Designed to reduce friction and facilitate smooth movement, it efficiently handles both axial and radial loads.

Technical Specifications

Operational Capability

- Radial load support
- Axial load support
- Friction reduction

Design Features

Robust Housing • Internal Protection • Industrial Grade

Bearing Category

Ball Bearing

Material Composition

Cast Iron, Steel
