

Machinery Component with Threaded Ports

This precision-engineered machinery component is designed for general use. It features a robust construction with multiple threaded ports for secure connections and a circular diaphragm.

Product Overview

Precision-Engineered Machinery Component

This machinery component is a robust, precision-engineered part designed for reliable performance in demanding industrial environments. Featuring a metallic finish and a circular diaphragm design, it is ideal for various pressure or fluid control systems. The unit includes multiple threaded ports to ensure secure and efficient connections within your existing machinery infrastructure.

Technical Specifications

Available Air Tank Volumes

- 45 gallons (Model AV-45)
- 100 gallons (Model AV-100)

Max. Working Temperature	60
Design Features	Threaded Ports, Metallic Finish, Circular Diaphragm
