

Machinery Gasket Washer

This gasket washer is designed for use in machinery and industrial applications. The materials used provide resistance to wear, corrosion, and high temperatures, making it suitable for demanding industrial environments.

Product Overview

Industrial-Grade Sealing Solution

This high-quality gasket and washer combination is engineered for demanding industrial machinery and mechanical assemblies. Featuring a robust construction with a distinct inner purple ring and an outer copper-colored ring, it provides a reliable and durable seal. Designed for optimal performance, this component effectively prevents leaks and maintains system integrity in high-temperature and corrosive environments.

Technical Specifications

Primary Applications

- Machinery sealing
- Mechanical assemblies
- Industrial fastener support

Design Features

Central bore • Dual-ring construction • Industrial-grade

Material Characteristics

Wear-resistant, Corrosion-resistant, High-temperature resistant
