

Machinery Moving Roller Skids

Machinery moving roller skids are also known as transport dollies and load moving skates. They are designed for the easy relocation of heavy machinery or equipment in industrial settings.

Product Overview

Industrial Machinery Moving Skids

These heavy-duty roller skids are designed for the efficient transport and relocation of massive industrial equipment. By keeping the load profile low to the ground and reducing the force required to pull or push, these dollies ensure safety and precision during complex logistics operations. Built for durability, they serve as a long-term professional solution for workshops, factories, and heavy-duty cargo handling.

Technical Specifications

Max Load Capacity

2000 tons

Load Capacity

Key Operational Features

- Low profile design for stability
- Integrated mounting points
- High maneuverability
- Customizable configurations

Wheel Materials

Nylon, Polyurethane, Steel

Quality Assurance

Quality Grade

Heavy Duty • Professional Grade • Durable
