

Machinery Moving Skates with Rollers

Roller skids are designed to move machinery or heavy objects, using integrated rollers to reduce friction. This allows for lighter and faster movement of heavy loads.

Overview

Heavy-Duty Machinery Movers

These machinery moving skates are designed for transporting large and heavy equipment efficiently. Featuring a robust steel frame construction with multiple rollers, they provide a safe and reliable solution for internal logistics. They are versatile enough for use on cement floors, building sites, and various industrial environments.

Technical Specifications

Roller Material Options	Steel, Polyurethane
Frame Construction	Robust Steel

Applications

Suitable Environments

- Cement floors
- Building sites
- Outdoor industrial areas
- Workshops

Key Features

Performance Highlights

1 Heavy-Duty

Design Focus

2 Multi-Surface

Surface Compatibility
