

Machinery Skates for Heavy Load Transport

Machinery skates are designed for moving heavy loads and equipment. They feature durable steel frames and high-capacity rollers for smooth, stable movement in industrial environments.

Product Overview

Heavy Load Transport Solutions

These machinery skates are engineered for the safe and efficient transport of heavy industrial equipment. Designed with high-capacity rollers, they ensure excellent load stability and rigidity while protecting floor surfaces. Built for durability and safety, these skates are an essential tool for professional material handling applications.

Technical Specifications

Wheel Material Options	Polyurethane, Nylon, Alloy Steel
Manufacturing Experience	20 years

Compliance & Quality

Certifications

CE • GS • ISO 9001

Usage Guidelines

Surface Recommendation	For optimal results, place a steel plate on the floor or utilize the U-bar configuration before application.
