

Magnesium Pressure Processing System

This pressure system is specifically designed for processing magnesium under controlled conditions. It includes a cylindrical pressure vessel with flanged connections, supported by a heavy-duty frame, and incorporates a filtration system.

Product Overview

Industrial Magnesium Processing

This Magnesium Pressure Processing System is engineered for secure and controlled handling of magnesium materials in industrial environments. Featuring a robust heavy-duty frame and a durable cylindrical pressure vessel with flanged connections, it ensures operational stability and longevity. The inclusion of a dedicated filtration system with integrated lifting lugs allows for efficient material throughput and simplified installation or maintenance.

Technical Specifications

Included Components

- Cylindrical pressure vessel
- Flanged connections
- Filtration unit
- Lifting lugs
- Manual handwheel control

Operational Control

Manual operation via large ergonomic handwheel

Construction

Robust Metal, Heavy-duty Frame
