

Manganese Ore Raymond Grinding Mill

The Raymond grinding mill efficiently grinds manganese ore with adjustable fineness and low power consumption. This system integrates drying, grinding, classification, and transport, making it suitable for processing various non-metallic minerals.

Product Overview

High-Efficiency Grinding Solution

This Raymond grinding mill is a high-performance, environmentally friendly system designed for the processing of manganese ore and other non-metallic minerals like gypsum, coal, and barite. The equipment integrates drying, grinding, classification, and transport into a single streamlined process, offering low power consumption and easy maintenance. With its robust construction and advanced design, it provides an ideal solution for large-scale mineral powder production across various industrial sectors.

Performance Metrics

Capacity Range

10 tph

Minimum Capacity

50 tph

Maximum Capacity

Key Features

Operational Advantages

- High grinding efficiency
- Low power consumption
- Large feeding size
- Adjustable product fineness
- Low noise and dust emission
- Integrated drying, grinding, and classification

Applications

Industrial Applications

Metallurgy, Battery Industry, Agriculture, Environmental Protection, Medical, Welding

Technical Specifications

Compatible Materials

- Manganese ore
- Gypsum
- Coal
- Barite
- Calcite
- Bauxite

Available Models

- HC1300
- HC1500
- HC1700
- HC1900
- HC2000
