

Manual Coil Winding Machine

The machine features a 16 control chip and simple parameter settings. Its high-quality steel desktop design makes operation more convenient, and coil parameters can be set by section with manual winding.

Product Overview

Precision Manual Coil Winding

This single-chip microcomputer numerical control winding machine is designed for high-precision coil winding applications. It features a robust steel desktop design with a user-friendly digital interface, allowing for precise control over winding parameters like speed, turns, and pitch. Ideal for both small-scale and industrial environments, it ensures accurate and consistent production results.

Technical Specifications

Rated Voltage	220 V
Rated Frequency	50 Hz
Motor Power	120 W

Features & Control

Performance Metrics

120 W

Motor Power

220 V

Voltage

Control System	16-bit single-chip microcomputer
Safety Features	Emergency Stop, Fuse Protection

Applications

Application Range

- Small transformers
- Relays
- Power converters
- Communications coil meter coils
- Stator coils for fans

Certifications

Compliance & Standards

CE • ISO 9001 • CQC
