

Manual Fin Straightening Tool for Heat Exchangers

This manual fin straightening tool is designed for use on heaters and heat exchangers. It is used to straighten bent fins on radiators, air conditioning condensers, and other heat exchange components, improving airflow and heat transfer efficiency.

Product Overview

Precision Fin Maintenance

This manual fin straightening tool is specifically engineered for professional maintenance of heaters and heat exchangers. Its durable construction and adjustable screw mechanism allow for precise fin alignment, which is critical for restoring optimal airflow and heat transfer efficiency. Designed for versatility, this tool effectively services radiators, air conditioning condensers, and various heat exchange components, even in tightly spaced configurations.

Technical Details

Key Features

- Adjustable screw for precise alignment
- Durable construction
- Designed for tightly spaced fins

Operation	Manual
Compatible Applications	Radiators, AC Condensers, Heat Exchangers, Heaters
