

Manual Globe Valve

This globe valve is designed for regulating flow in industrial applications. It features a handwheel for manual operation, allowing precise control over fluid or gas flow.

Product Overview

Industrial Globe Valve

This manual globe valve is engineered to meet strict GOST standards for industrial flow regulation. Designed for durability and performance in demanding environments, it features a robust body capable of withstanding high pressures and temperatures. The handwheel operation provides precise throttling and shut-off control, making it an ideal choice for fluid or gas management where frequent, reliable operation is essential.

Technical Specifications

Size Range	1/2" - 2"
Manufacturing Standard	GOST
Operation	Manual handwheel

Features

Key Capabilities

- Precise flow throttling
- Reliable shut-off capability
- High-pressure resistance
- High-temperature tolerance
- Industrial-grade durability
