

Manual Hydraulic Stacker

The manual hydraulic stacker is a versatile material handling equipment for lifting and transporting loads in warehouses, factories, and industrial environments. It features a robust steel frame, hydraulic lifting mechanism, and adjustable forks to accommodate various pallet sizes.

Product Overview

Versatile Material Handling Solution

This manual hydraulic stacker is engineered for efficient lifting and transportation of loads within warehouses, factories, and industrial settings. Featuring a robust steel frame and a reliable hydraulic lifting mechanism, it offers precise control for stacking pallets and loading trucks. Its compact design and adjustable fork widths ensure maneuverability in confined spaces, making it a highly adaptable tool for daily logistics operations.

Performance Specifications

Load Capacity

1000 kg
Max Load

Maximum Lifting Height	1.6 m
------------------------	-------

Design & Build

Frame Material	Robust Steel
----------------	--------------

Fork Adjustability	Yes
--------------------	-----

Safety & Operation

Safety Features	Brakes, Overload Protection
-----------------	-----------------------------

Operation Method	Manual Hydraulic
------------------	------------------
