

Manual Metal Sheet Bending Machine

This hand-operated bending machine is designed for shaping metal sheets and plates. It features adjustable settings for bend radius and angle, providing flexibility in achieving desired shapes.

Overview

Versatile Manual Bending Solution

This hand-operated bending machine is designed for shaping metal sheets and plates with precision and control. Featuring a robust construction and manual hand-wheel operation, it is ideal for small-scale production, prototyping, and custom fabrication. Its compact footprint makes it an excellent choice for workshops where space is at a premium.

Technical Capabilities

Bending Adjustments

- Adjustable bend radius
- Adjustable bend angle
- Precision roller system

Compatible Materials	Steel, Aluminum, Copper
Operation Mode	Manual (Hand-operated)

Design & Build

Construction

Robust • Compact

Primary Applications

- Small-scale production
- Prototyping
- Custom metal fabrication
