

Manual Pallet Stacker

This manually operated stacker is designed for moving and lifting palletized goods. It utilizes a hydraulic lift mechanism for raising and lowering forks, offering precise load placement.

Product Overview

Manual Pallet Stacker Overview

This manual pallet stacker is a high-performance lifting device designed for the efficient transport and vertical stacking of palletized goods. It utilizes a precision hydraulic lift system that allows for smooth, controlled adjustments during load placement in warehouse environments. Built for durability and versatility, the unit features adjustable forks to accommodate a wide variety of pallet dimensions. Integrated safety components, including a hand-operated brake and load-securing mechanisms, ensure operational stability and protection for the user and goods.

Technical Features

Lift System	Hydraulic
Fork Configuration	Adjustable

Safety & Operation

Safety Features	Hand-operated brake, Load-securing mechanism
Maneuverability	Yes
