

Manual Pallet Truck

This pallet truck is manually operated and designed for lifting and transporting pallets. It features enhanced corrosion resistance due to advanced plating technology, making it suitable for use in low-corrosive, cold room, and clean room environments.

Overview

Manual Pallet Truck (DBCZ)

This manually operated material handling equipment is designed for efficient lifting and transporting of palletized goods. Featuring a robust hydraulic system for smooth raising and lowering of forks, it offers reliable performance in demanding industrial environments. Constructed from durable steel, this truck is an essential tool for loading, unloading, and moving pallets within warehouses, factories, and distribution centers.

Technical Specifications

Operation	Manual
Material	Steel
Key Features	Hydraulic Lifting System, Steering Handle, Load Wheels

Applications

Suitable Environments

- Warehouses
- Factories
- Distribution Centers
