

Manual Seedling Transplanting Tool

This transplanting device is a specialized tool designed for the precise and efficient transplantation of seedlings or small plants. The device incorporates a unique tip design that minimizes root disturbance during the transplanting process, promoting faster establishment and reduced transplant shock.

Product Overview

Professional Seedling Transplanting Device

The PHD007SQL is a professional-grade transplanting device engineered for precision and efficiency in horticultural settings. Featuring a unique tip design, it minimizes root disturbance to promote faster plant establishment and reduce transplant shock. The ergonomic handle design ensures user comfort and control, making it an ideal choice for nurseries and greenhouses seeking to improve overall planting efficiency.

Technical Specifications

Model Number	PHD007SQL
Application Areas	Nurseries, Greenhouses, Gardens

Key Features

Operational Advantages

- Unique tip design to minimize root disturbance
- Ergonomic handle for reduced user fatigue
- Durable material construction for longevity
- Improved seedling survival rates
