

Manually Operated Fuel Transfer Pump

These are manually operated fuel transfer pumps for gasoline and similar fuels. The pumps are positive displacement, featuring robust metal construction and threaded fittings for secure connections.

Product Overview

Reliable Manual Fuel Transfer Solution

This manually operated fuel transfer pump is designed for efficient and safe dispensing of fuel from drums or small tanks. Featuring robust metal construction, it provides a reliable solution for industrial and machinery applications where manual operation is required. Its positive displacement design ensures consistent fluid transfer, making it an essential tool for maintenance and refueling tasks.

Technical Specifications

Pump Type	Positive Displacement
Construction Material	Metal
Operation Method	Manual
Intended Applications	Fuel Transfer, Industrial Machinery, Drum Dispensing, Maintenance
Connection Type	Threaded Fittings
