

Marine Ballast Pump for Fluid Transfer

This ballast pump is designed for efficient fluid transfer in marine applications. It features a robust construction for durability and long service life.

Overview

Marine Ballast Pump Overview

This high-capacity centrifugal pump is engineered specifically for marine fluid transfer applications, including ballast water management and vessel stabilization. Designed for durability in harsh maritime environments, it efficiently handles seawater for loading, off-loading, and trimming ballast tanks. The robust construction ensures reliable performance for ships, submarines, and offshore oil and gas platforms.

Technical Specifications

Fluid Compatibility

- Seawater
- Ballast Water

Pump Type

Centrifugal

Primary Applications

Ballast Water Transfer, Ship Stabilization, Trimming, Heeling, Submarine Operations, Offshore Platforms

Design Features

Key Design Features

Vertical Inline Configuration • High-Volume Transfer • Robust Construction • Corrosion Resistant
