

Marine Combination Hydrophore Water Pressure System

The series hydrophore is suitable for ship fresh water pipes and seawater pipes. The unit combines hydrophore, water pumps, valves and pipes together.

Overview

Marine Hydrophore System

The Marine Combination Hydrophore Water Pressure System is a self-contained, modular solution designed for ship fresh water and seawater piping systems. This compact unit integrates the pressure vessel, water pumps, control panels, and piping into a single, easy-to-maintain package. It ensures consistent and reliable water pressure for various onboard requirements.

Technical Specifications

Pump Configuration Options

- Vertical configuration
- Horizontal configuration

Key Integrated Components

- Hydrophore Tank
- Water Pumps
- Control Panel
- Pressure Gauge
- Piping Assembly

Design Advantages

Modular Design • Compact Footprint • Easy Installation • Low Maintenance

Suitable Applications

Ship Fresh Water Pipes, Seawater Pipes, Marine Water Supply
