

Marine Diesel Engine

This marine diesel engine is designed for heavy-duty use in engineering vessels and other marine applications. It delivers strong dynamic performance, good economy, and high reliability.

Overview

High-Performance Marine Propulsion

The 3240 series marine engine is a heavy-duty power solution engineered specifically for demanding marine environments, including engineering vessels. It utilizes advanced technology to deliver a balance of exceptional power, long-term durability, and operational reliability. Designed with efficiency in mind, the engine provides excellent fuel economy while maintaining low emission levels to meet modern operational standards.

Technical Specifications

Series	3240 Series
Primary Applications	Engineering Vessels, Marine Propulsion, Heavy-Duty Marine

Performance Metrics

Key Performance Indicators

3240

Series Designation

Features

Key Advantages

- Robust construction for harsh marine conditions
- Advanced technology for extended service life
- High fuel efficiency
- Low emission output
- Configurable to specific power requirements
