

Marine Ductwork Component

This fabricated steel ductwork component is designed for marine applications. The component features a complex curved design and robust construction, suitable for integration with marine exhaust or ventilation systems.

Product Overview

Marine Ventilation and Exhaust Ducting

This large-scale fabricated steel ductwork component is engineered specifically for heavy-duty marine exhaust and ventilation systems. Featuring a robust construction with complex curved geometries, it is designed to integrate seamlessly into complex shipboard infrastructure. The unit includes multiple access ports and reinforced attachment points, ensuring reliable performance in demanding maritime environments.

Technical Specifications

Key Features

- Complex curved cylindrical design
- Multiple access ports
- Integrated attachment points
- Heavy-duty industrial fabrication

Material Composition	Fabricated Steel
Design Type	Marine Grade, Exhaust System, Ventilation System
