

Marine GPS Fish Finder with Side Imaging

This marine GPS fish finder features a high-resolution display and side imaging sonar. It combines GPS chartplotting capabilities with advanced sonar features for comprehensive navigation.

Product Overview

Professional Marine Navigation and Sonar

This high-resolution marine electronics system combines advanced Side Imaging sonar technology with precise GPS chartplotting capabilities. Designed for serious anglers and professional boaters, it provides detailed underwater views and comprehensive navigation tools to enhance situational awareness. The unit is engineered for reliability and performance in demanding marine environments, ensuring optimal fish-finding and navigation functionality.

Technical Specifications

Model Number	407990-1
Display Series	1198c SI HD Combo

Key Features

Navigation

- GPS Chartplotting
- Mapping Support

Sonar Technology

Side Imaging, High Definition

Performance Metrics

System Data

19 V

Voltage

11.8 V

Operating Voltage

3.1 dB
