

Marine-Grade Electronic Components and Switches

Electronic components and switches designed for shipbuilding and marine applications. Includes integrated circuits, toggle switches, push-button switches, and potentiometers suitable for various control and instrumentation systems.

Product Overview

Marine-Grade Reliability

These marine-grade electronic components and switches are specifically engineered to withstand the demanding conditions of shipbuilding and maritime instrumentation. The collection includes high-performance integrated circuits, reliable toggle switches, and precision push-button controls. Designed for longevity and consistent operation, they are essential for critical control systems in salt-water environments.

Technical Specifications

Part Number Reference

Component Series

8025F510-L220

8025F510-P220-460

43000210

43000110

Available Component Types

Integrated Circuits, Toggle Switches, Push-button Switches, Potentiometers

Compliance and Usage

Primary Environment

Marine-Grade • Shipbuilding • Instrumentation Systems
