

Marine Ladder Winch

This heavy-duty ladder winch is designed for marine applications. It provides reliable and precise control for raising and lowering ladders on ships and offshore platforms.

Overview

Marine Ladder Winch

This heavy-duty ladder winch is engineered specifically for demanding marine applications, providing precise and reliable control for raising and lowering ladders on ships and offshore platforms. Built to withstand harsh environments, the unit features a high-torque motor combined with precision gearing for consistent operation. It incorporates a fail-safe braking system to ensure maximum safety and is designed for straightforward installation and maintenance, making it a dependable choice for long-term maritime use.

Technical Specifications

Key Features

- High-torque motor
- Precision gearing system
- Fail-safe braking mechanism
- Corrosion-resistant construction

Application	Marine, Offshore Platforms, Ship Deck Machinery
Maintenance	Designed for ease of installation and simplified maintenance procedures.
