

Marine Low-Temperature Liquid Tank

This is a specialized tank designed for marine transportation of liquids. It is constructed with insulation to maintain extremely low temperatures during transit.

Product Overview

Industrial Cryogenic Storage

This large-scale, insulated low-temperature liquid tank is specifically engineered for secure maritime transportation. Its robust, cylindrical design with reinforced rounded ends ensures the safe containment of cryogenic liquids under extreme conditions. The exterior is finished with a protective white layer to enhance thermal efficiency during transit.

Technical Specifications

Tank Classification

7.8-CO2 • Low-Temperature

Primary Application

Maritime Transport, Cryogenic Liquid Storage

Construction Details

Form Factor

Cylindrical with rounded ends

Insulation Type

High-performance protective white external coating
