

Marine Mooring Chock

Marine mooring chocks ensure secure and reliable vessel attachment. Their smooth, rounded surface minimizes wear and tear on mooring lines, making them suitable for ports, harbors, and offshore facilities.

Product Overview

Heavy-Duty Marine Mooring Solutions

These mooring chocks are engineered for secure and reliable vessel mooring in demanding marine environments. Constructed from high-quality, robust steel, they provide exceptional strength and durability for long-term usage in ports, harbors, and offshore facilities. The design features a smooth, rounded surface specifically engineered to minimize friction and prevent excessive wear and tear on mooring lines.

Technical Specifications

Design Features

- Heavy-duty construction
- Smooth, rounded surface to reduce line wear
- Low-friction surface profile
- Robust design for harsh marine conditions

Compatibility

Various Vessel Sizes • Multiple Mooring Configurations

Material

High-quality Steel

Suitable Environments

Ports, Harbors, Offshore Facilities
