

Marine Mud Box for Bilge Water Filtration

This mud box is designed for filtering bilge water in shaft tunnels. It is suitable for use with seawater and bilge water.

Product Overview

Marine Mud Box Functionality

The Marine Mud Box is a critical component designed for the waterpipe suction systems of bilge water within ship shaft tunnels. Engineered to operate effectively with seawater and bilge water, it serves as a robust filtration solution. Its primary function is to trap debris, mud, sand, and other particulate matter, thereby preventing clogging and damage to downstream marine equipment like pumps and valves.

Technical Specifications

Compatible Media	Seawater, Bilge Water
Primary Application	Waterpipe suction systems for shaft tunnel bilge water

Design & Maintenance

Connection Type

Flanged

Maintenance Features

- Removable lid for easy access
- Internal filter basket for debris trapping
- Simplified cleaning process
