Product Overview

Marine Steering Cable M66

The Marine Steering Cable M66 is a high-performance mechanical control cable engineered for reliable steering in marine environments. Designed for compatibility with various steering helms and outboard engines, it features a durable stainless steel core and corrosion-resistant construction to withstand harsh water conditions. This cable ensures smooth, precise transmission of rotational motion from the steering wheel to the rudder or motor for optimal boat control.

Technical Specifications

Supported Models

- M55
- M66

Material Composition

Stainless steel core, Stainless steel nuts

Outer Casing Color

Black

Application & Compatibility

Typical Applications

Yacht, Boat, Outboard Engine

Logistics & Packaging

Packaging Options

- Cartons
- Plastic bag

Customization

Length can be customized according to customer requirements
