

Marine Stockless Anchor

These marine stockless anchors are made from casting steel ZG200-400. They are used on ships and other marine vessels to provide secure anchoring.

Overview

Marine Stockless Hall Anchor

The Marine Stockless Anchor, commonly known as a Hall anchor, is the industry standard for conventional ship anchoring. Designed primarily for use as a bower anchor, this robust component is engineered to provide reliable performance and secure holding power in various maritime conditions. It is manufactured from high-quality casting steel to ensure long-term durability and safety for vessels.

Technical Specifications

Weight Range

80 KGS

Minimum Weight

30000 KGS

Maximum Weight

Available Types

Type A, Type B, Type C

Material Composition

Casting Steel ZG200-400

Compliance & Certification

Classification Society Certificates

ABS • LR • BV • NK • GL • DNV • IRS • CCS
