

Maritime Search and Rescue Vessel

The rescue vessel is designed for maritime search and rescue operations, providing rapid response and support in emergency situations. It is equipped with advanced sensors, communication systems, and medical facilities to ensure effective rescue operations in diverse marine environments.

Overview

Maritime Search and Rescue Capability

This specialized vessel is purpose-built for maritime search and rescue operations, offering a robust platform for emergency response. It features a sophisticated multi-level superstructure equipped with advanced communication and navigation arrays to ensure operational readiness in demanding marine environments. Designed for efficiency, the vessel integrates comprehensive rescue gear and onboard medical facilities to provide critical life-saving support during rapid response scenarios.

Technical Specifications

Core Operational Features

- Advanced maritime navigation system
- Integrated communication arrays
- Dedicated search and rescue gear
- Onboard medical support facilities
- Multi-level superstructure design

Vessel Classification

Search and Rescue • Rapid Response • Maritime Utility

Vessel Identification

ZHONG GUO HAI SHI 202, China Maritime 202
