Overview

Advanced Marshmallow Manufacturing Solution

This high-efficiency production line is designed for the continuous manufacturing of a wide variety of marshmallow shapes and sizes. The system integrates an advanced aeration unit for precise texture and density control, ensuring consistent product quality. It features versatile capabilities for producing single-color, multi-color, twisted, and center-filled marshmallow products, making it an ideal solution for large-scale confectionery operations.

Production Capabilities

Operating Modes

- Extruded Marshmallow Line
- Deposited Marshmallow Line

Supported Product Types

Single Color, Combined Colors, 4-Color Twisted, Center-Filled Extruded, Jelly Center-Filled Deposited

Technical Features

Key System Components

- Advanced Aerator
- Multi-stream Divider
- Flavor and Color Injection System
- Extrusion Manifold
- Depositing Manifold
- Compact Preparation Unit

Operational Features

Continuous Manufacturing • Precision Control • Easy Maintenance • Food Safety Compliant • User-Friendly Interface

Construction Material

Food-grade stainless steel
