

Mass Air Flow Sensor for Lada

This mass air flow sensor is designed for Lada 112 1.5 Hatchback. The sensor measures the amount of air entering the engine, providing data to the ECU to optimize fuel delivery and ensure efficient combustion.

Product Overview

Precision Air Flow Measurement

This Mass Air Flow (MAF) sensor is engineered to accurately measure the volume of air entering the engine, providing critical data to the Engine Control Unit (ECU). By optimizing fuel delivery and combustion efficiency, this component helps restore engine performance and improve fuel economy. It serves as a direct replacement part, ensuring compatibility with specified Lada vehicle models.

Compatibility

Vehicle Application

- LADA 112 1.5 Hatchback
- VAZ 2108-21099
- VAZ 2113-2115
- VAZ 2110-2112
- Chevrolet Niva (1999 - 2004)
