

Material Handling Conveyor System

This material handling conveyor system is designed for efficient material transport. It features a durable frame, a conveyor belt system with a blue cover, and a motor for automated operation.

Overview

Industrial Fluid Purification System

This material handling conveyor system is engineered for industrial fluid purification, specifically designed for applications like grinding, lapping, and wire drawing. By utilizing a powerful magnetic drum and centrifugal force, the unit automatically separates iron filings from cutting fluids, significantly improving product quality and production efficiency. Its compact, durable design ensures easy installation while extending the operational lifespan of both your equipment and cutting tools.

Technical Specifications

Key Operational Benefits

- Automated separation of cutting fluid and iron filings
- Prolongs service life of equipment and cutting tools
- Reduces precision machining costs
- Improves production efficiency and product quality

Suitable Applications

Grinding, Lapping, Wire Drawing, Cooling Fluid Purification, Mechanical Processing

Design & Maintenance

Design Highlights

Compact Volume • Easy Installation • Isolated Transmission System • Magnetic Drum Separation

Maintenance Accessibility

The transmission system is physically separated from the main body, facilitating convenient cleaning and maintenance procedures.
