

Material Slitting Machine

This slitting machine is designed for precise cutting of various materials into narrower widths. It features adjustable tension control and multiple cutting blades for efficient production and optimal material handling.

Overview

High-Precision Industrial Slitting Machine

This high-speed slitting machine is designed for the precision conversion of films, foils, paper, textiles, and laminates. Engineered for industrial environments, it features robust construction and automated tension control to ensure minimal material waste. Its user-friendly interface allows for seamless operation and precise adjustments, making it an ideal solution for producing customized roll widths.

Technical Specifications

Operational Features

- Adjustable slitting widths
- Automated tension control
- High-speed slitting capability
- User-friendly control interface
- Integrated safety features

Compatible Materials

Film, Foil, Paper, Laminates, Textiles
