

Material Testing Workstation

This test bench is designed for rigorous testing of materials and components under various load conditions. It features a robust frame constructed from heavy-duty steel, ensuring stability and durability during operation.

Overview

Professional Material Testing Workstation

This material testing workstation is engineered for high-precision evaluation of components and raw materials under varied load conditions. Built with a heavy-duty steel frame, the unit ensures maximum stability and consistent measurement accuracy. The modular architecture and advanced data acquisition capabilities make it a versatile tool for research, development, and rigorous quality control environments.

Technical Specifications

Monitored Parameters

- Force
- Displacement
- Strain

Frame Material	Heavy-duty steel
Actuation System	Hydraulic

Application

Ideal Applications	Research and Development, Quality Control, Failure Analysis
--------------------	---

Design

Key Design Attributes

Modular Design • High Stability • Repeatable Testing
