

# Mechanical Cylinder Press for Metalworking

This mechanical cylinder press is a type of industrial machinery used for various metalworking operations. It is designed for pressing, punching, forming, and other similar applications in manufacturing and fabrication settings.

## Product Overview

### Industrial Mechanical Cylinder Press

This mechanical cylinder press is engineered for heavy-duty metalworking operations, including pressing, punching, and forming. Featuring a robust frame and a precision-controlled vertically moving ram, it provides reliable performance in demanding manufacturing and fabrication environments. The integrated worktable and comprehensive safety guards ensure both operational efficiency and operator protection.

## Technical Standards

### JIS Compliance

JIS1, JIS2, JIS3, JIS4, JIS5, JIS6, JIS7, JIS8

## Operational Features

### Safety and Control

- Integrated safety guards
- Dedicated control panel
- Robust frame construction

### Primary Applications

Pressing • Punching • Forming
