

Mechanical Fuel Transfer Pump

This mechanical fuel feed pump is designed for transferring fuel in machinery applications. It features a robust metal construction with multiple ports for inlet and outlet connections, and includes a manual priming lever for initial fuel delivery.

Product Overview

Mechanical Fuel Transfer Pump

This mechanical fuel feed pump is engineered for reliable fuel transfer in heavy-duty machinery and internal combustion engine applications. Featuring a robust metal construction, it ensures durability under demanding operating conditions. The design includes a manual priming lever for efficient initial fuel delivery, making it an essential component for system maintenance and operation.

Technical Specifications

Construction Material	Robust Metal
Application	Internal Combustion Engines, Machinery Applications

Features

Key Features

- Manual priming lever for initial fuel delivery
- Robust metal construction
- Multiple ports for inlet and outlet connections
