

Mechanical Safety Lock with Pivoting Arm

This mechanical safety lock is designed for securing equipment or structures. It features a pivoting arm with a pulley wheel at the end for cable or rope attachment.

Product Overview

Industrial Mechanical Safety Lock

This mechanical safety lock is engineered for high-security applications in demanding environments. Featuring a unique pivoting arm design with an integrated pulley wheel, it provides flexible options for cable or rope securement. Constructed from durable, corrosion-resistant alloys, the unit ensures long-term operational reliability and structural integrity.

Technical Specifications

Arm Mechanism	Pivoting arm with integrated pulley wheel
Material Composition	Stainless Steel, Corrosion-resistant Alloy
Mounting Options	Multiple mounting points for secure installation

Application

Suitable Environments

- Equipment securing
- Structure lockdown
- Industrial site safety
